

American Roulette

The chips used in American Roulette are coloured for identification only — each player receives different coloured chips and sets their value when they buy them.

Bets may be placed on any one number or combination of numbers, red or black colours, odd or even, or “0” which is coloured green.

Our American Roulette bets are as follows:

- A • red or black, odd or even, 1-18 or 19-36 even money
- B • groups of 12 numbers pays 2-1
- C • any one number or “0” pays 35-1
- D • any one of the six in the group pays 5-1
- E • any one of the four in the group pays 8-1
- F • any one of the three in the group pays 11-1
- G • any one of two numbers pays 17-1

When “0” appears, half of all even money bets will be returned to the player.

Gaming from 2pm seven days a week
